

Mobile Application

Proteus Mobile

Get the most productivity and performance from maintenance teams and assets with Proteus Mobile.

Update and view work orders on your smartphone or tablet - anywhere, anytime!

Proteus Mobile application gives maintenance technicians in the field invaluable asset data and history at their fingertips with improved accuracy and efficiency in the workplace. Equipment readings, usage history, security checks, and maintenance data can all be collected and entered into the CMMS database in real-time with this CMMS mobile application.

“Maintenance on the go with Proteus Mobile”

The Proteus Mobile module transfers PM/DM work orders from Proteus MMX to your iPhone®, iPad®, or Android® based phone/tablet or devices.

■ Benefits and Features

- Receive and close work orders on a mobile device
- Create new work orders on the job
- Update labor hours and parts quantities used
- Update existing PM/DM work orders and view history
- Voice recognition software helps record large amounts of data while out in the field
- Take pictures of the maintenance work carried out, upload it to document work carried out.

QR/Barcode Application

Latest Barcode Technology

CMMS systems can be programmed to scan barcodes with the use of a mobile device. A technician can, therefore, scan a barcode or Quick Response code to quickly find the asset or work order in the CMMS system. CMMS users don't have to waste time looking for the right item in the system. Users can barcode work orders to collect information on PM and DM work orders in the field.

Features:

- Update equipment runtime
- Adjust physical inventory
- Update tasks, parts, and labor on PM and DM work orders
- Scan equipment to select work orders
- Reduce entry errors

Integrated Software for Safety

Proteus CMMS is integrated with Brady Corporation's LINK360 software for lockout tagout and confined space software. The integrated software streamlines maintenance procedures and assists with maintaining compliance with OSHA regulations including adequate process and regular inspections. It puts worker safety as the highest priority.

Our new Proteus MMX Mobile CMMS is configured with the latest barcode technology and highly responsive software. It lets you capture data quickly, reduces downtime, and helps you keep your machines in mint condition. With the Proteus MMX Mobile CMMS, technicians will spend less time taking notes and focus on completing work orders instead.
