

Johnson Controls Interface

Smart Buildings, Smart Maintenance:

Correct faults faster, smarter and easier

Johnson Controls Enterprise Management OpenBlue is a comprehensive analytical cloud-based, cloud agnostic optimization tool that pro-actively analyzes building energy and equipment data to identify issues, faults and opportunities for improved performance and operational savings. Using parent-child meter/equipment space relationships, OpenBlue provides for enterprise building performance comparisons.

Integrating Proteus MMX and Johnson Controls, establishes a smart building management system that has far-reaching capabilities.

The integration will process alerts and alarms and incorporate them automatically into a standard work order process.

Advantages:

- Build agility and flexibility into operations
- Improve asset utilization with proactive asset management and consolidation of the systems
- Enhance operational capabilities by automating workflow reporting through key performance indicators and dashboards, and improving inventory data reliability
