

Active Directory Integration

Authenticate, authorize, create, update users and roles with single sign on.

Proteus MMX now includes Active Directory integration to make it faster and easier to use.

The user will no longer be required to log in while on the premise. The software will connect to the database and recognize the information.

Once logged in, the display of the screen will only show what the user has access to. (This includes service request users.)

Under settings, the active directory section has been upgraded to include the integration of users and roles.
