

MMX Rest Service Integration

Our custom integration services will save you time, reduce costs and increase productivity.

Proteus REST service integration is an optional Program Utility and API's (Application Programming Interface) designed for Proteus MMX users to exchange or share data with most corporate systems such as Purchasing, ERP, SAP, MES or Accounting.

Our highly flexible systems can integrate with your existing business systems such as;

- Inventory
- Scheduling
- Vendors
- Equipment
- Employee
- Labor
- Purchasing
- Transition

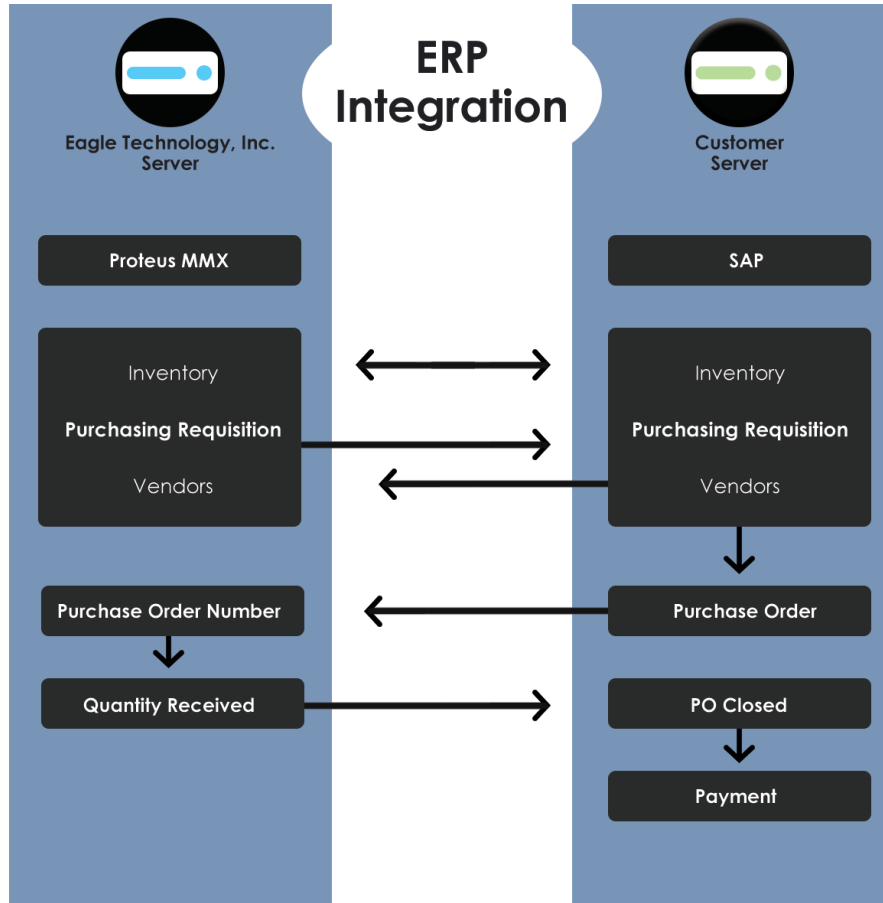

As stated above, our custom integration services will save you time, reduce costs and increase productivity.

The below scenario describes a situation where CMMS or maintenance management system communicates and receives data from ERP software such as SAP. There may also be a requirement for the accounting system to read or "pull" data from Proteus MMX.

MMX Rest Service Integration

Typical ERP Integration:

- Periodically synchronize Inventory and Vendor records
- Generate Purchase Requisition in CMMS
- Send Purchase Requisition to SAP
- Purchasing department orders parts (or services) using SAP
- SAP sends information (such as, vendor, parts and quantity ordered, delivery date) to CMMS
- Parts are received in CMMS
- CMMS sends parts receipt info to SAP
- SAP does invoice matching and closes PO
- SAP processes payment to the Vendor.
